# Bike Sharing Demand Prediction

- Problem Definition
- Bike Sharing Demand Prediction**
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

Defn

Bike-sharing systems are a means of renting bikes, through which people can rent a bike from any place and return it when they arrive at their destination. The bike-sharing system clearly records the time of travel, the place of departure, the place of arrival and the time. Therefore, it can be used to study mobility in cities. In this project, historical usage patterns were combined with weather data to predict bike rental demand in Washington, D.C.

- Researchers can use bike sharing systems as a sensor network, which can be used for studying mobility in a city **one student distinctive** from others.
- NBA coaches would prefer to find out the strengths and weaknesses of the player (a query object).

Player	3PT%	FTA	FT%	To
$P_1$	65	4	33	8
$P_2$	78	1	65	5
$P_3$	58	6	46	3

# Outlying Aspects Mining vs Outlier Detection

- Problem Definition
- Bike Sharing Demand Prediction**
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

Player	3PT%	FTA	FT%	To
$P_1$	65	4	33	8
$P_2$	78	1	65	5
$P_3$	58	6	46	3
$P_4$	68	1.2	85	6.2
$P_5$	58	6.2	36	3.4

## Outlying Aspects Mining

- Explain the distinctive **aspects** of the query object.
- The query object may (or may not) be an outlier.

## Outlier Detection

- Find out **all** unusual **objects** in the whole dataset.
- **No** explanation on how they are different.

# Group Outlying Aspects Mining

- Problem Definition
- Bike Sharing Demand Prediction
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

Defn

Group outlying aspects mining aims to identify the outstanding features of the group of query object.

- Doctors desire to identify the merits & demerits between a group of cancer patients and normal people.
- NBA coaches are passionate about exploring the obvious advantages & disadvantages of the team.

Figure 1: Medical

Figure 2: NBA-Team

# Problem Formalization

Problem Definition
Bike Sharing Demand Prediction
Group Outlying Aspects Mining
Related Work and Challenges
GOAM Algorithm
Evaluation Results
Conclusion

Defn

Group outlying aspects mining aims to identify the top-k group outlying subspace  $s \subseteq F$  in which the query group  $G_q$  is distinctive with other groups.

- $G = \{G_q, G_2, G_3, \dots, G_n\} \Leftrightarrow$  a set of groups.
- $G_q \Leftrightarrow$  the query group.
- Other groups  $\Leftrightarrow$  comparison groups.
- Each object in the group has  $d$  features  $F = \{f_1, f_2, \dots, f_d\}$ .

# Term Definition

- Problem Definition
- Bike Sharing Demand Prediction
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

## ■ Top-k group outlying subspaces

- ◆  $\rho_s(\cdot) \Rightarrow$  outlying scoring function.
- ◆  $\rho_s(\cdot)$  quantifies the outlying degree of the query group  $G_q$  in the subspace  $s$ .
- ◆ Order by DESC using scoring function  $\rho(\cdot)$  to identify top K group outlying subspaces.

(a) Original Feature Spaces

(b) Group Outlying Spaces

(c) Another Subspaces

- Problem Definition
- Bike Sharing Demand Prediction
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Trivial Outlying Features
  - ◆ One-dimension subspaces.
  - ◆  $G_q$ 's outlying degree  $\rho(\cdot) > \alpha$ .

Table 1:  $\alpha = 4$

Feature	Outlying Degree
$\{F_1\}$	4.351
$\{F_3, F_4\}$	4.024
$\{F_2, F_4\}$	2.318
$\{F_2\}$	2.002
$\{F_3\}$	1.028

- Problem Definition
- Bike Sharing Demand Prediction
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Non-Trivial Outlying Subspaces
  - ◆ Multi-dimension subspaces.
  - ◆  $G_q$ 's outlying degree  $\rho(\cdot) > \alpha$ .

Table 2:  $\alpha = 4$

Feature	Outlying Degree
$\{F_1\}$	4.351
$\{F_3, F_4\}$	4.024
$\{F_2, F_4\}$	2.318
$\{F_2\}$	2.002
$\{F_3\}$	1.028

## ■ Existing Methods - Feature selection

- ◆ To distinguish two classes: the query point (positive) & rest of data (negative)

### Disadvantages

- ◆ Positive and negative classes are **Not** balanced.
- ◆ **Not** quantify the outlying degree accurately.
- ◆ **Not** identify group outlying aspects.

### Advantages

- ◆ Easy to operate.
- ◆ Resolve dimensionality bias.

- Related Work - Outlying Aspects Mining
- Challenges (1)
- GOAM Algorithm
- Evaluation Results
- Conclusion

## ■ Existing Methods - Score-and-search

- ◆ Define an outlying score function.
- ◆ Search subspaces.

### Disadvantages

- ◆ Dimensionality bias.
- ◆ Search efficiency is **Not** high (dataset is large).
- ◆ **Not** identify group outlying aspects.

### Advantages

- ◆ Quantify the outlying degree correctly.
- ◆ High Comprehensibility.

# Step One - Group Feature Extraction

- Problem Definition
- Related Work and Challenges
- GOAM Algorithm
- Step One - Group Feature Extraction**
- Step Two - Outlying Degree Scoring
- Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

■ Suppose  $f_1, f_2, f_3$  are three features of  $G_q$ .

$$f_1: \{x_1, x_2, x_3, x_4, x_5, x_2, x_3, x_4, x_1, x_2\}$$

$$f_2: \{y_2, y_2, y_1, y_2, y_3, y_3, y_5, y_4, y_4, y_2\}$$

$$f_3: \{z_1, z_4, z_2, z_4, z_5, z_3, z_1, z_2, z_4, z_2\}$$

Figure 6: Histogram of  $G_q$  on three features

# Step Two - Outlying Degree Scoring

- Problem Definition
- Related Work and Challenges
- GOAM Algorithm
- Step One - Group Feature Extraction
- Step Two - Outlying Degree Scoring
- Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

- Calculate Earth Mover Distance
  - ◆ Represent one feature among different groups
  - ◆ Purpose: calculate the minimum mean distance

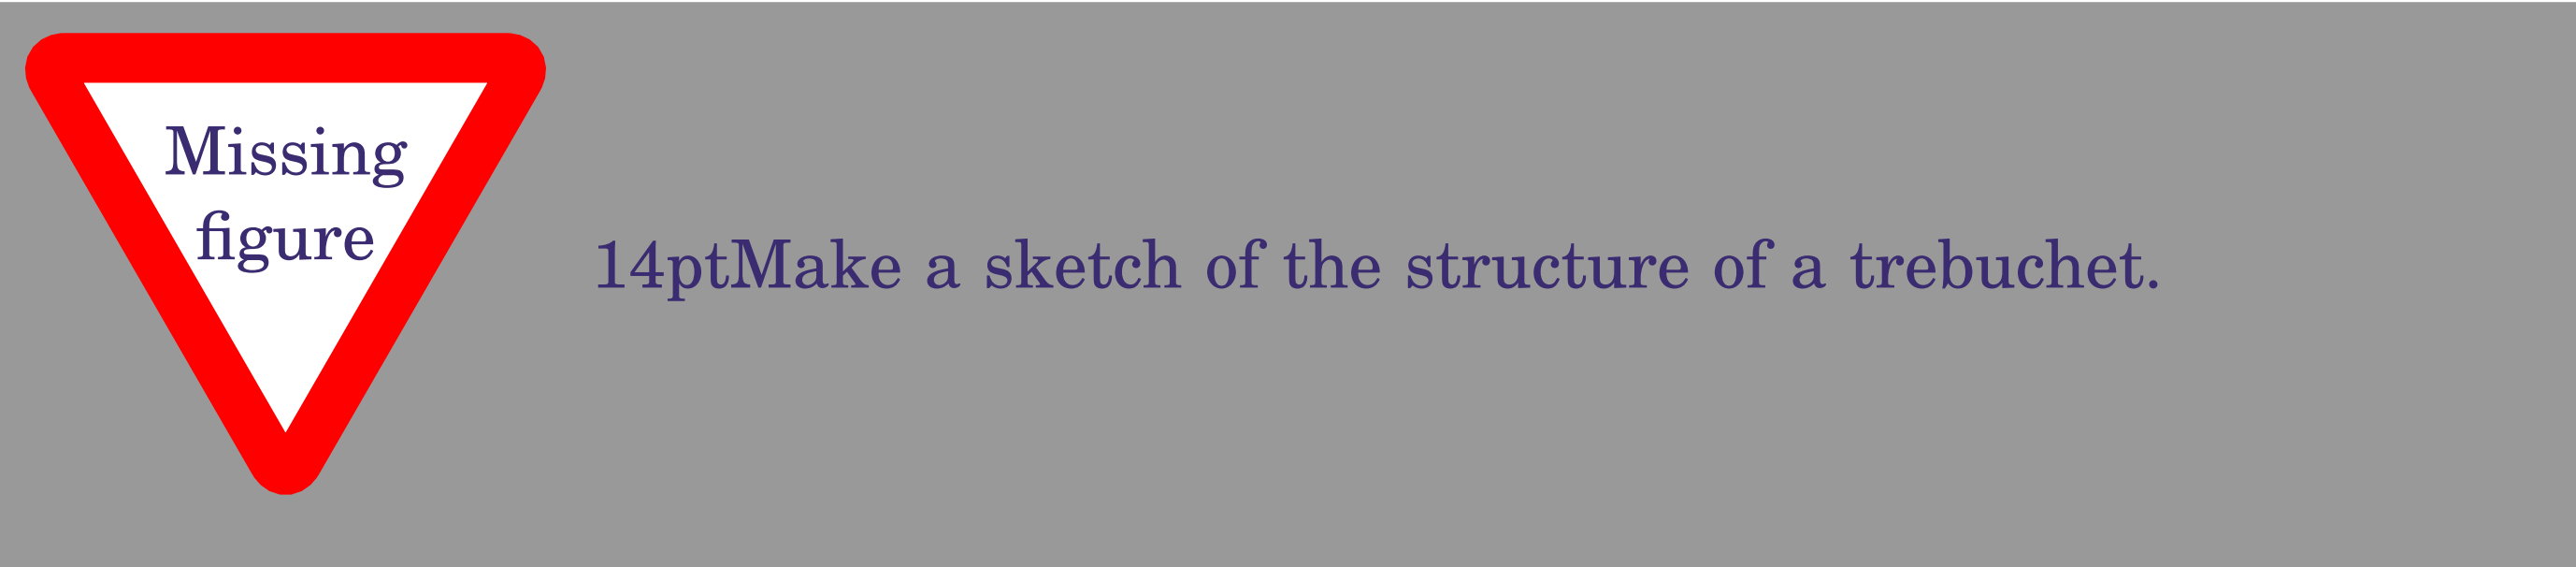

Figure 7: EMD of one feature

# Step Two - Outlying Degree Scoring

Problem Definition
Related Work and Challenges
GOAM Algorithm
Step One - Group Feature Extraction
<b>Step Two - Outlying Degree Scoring</b>
Step Three - Outlying Aspects Identification
Evaluation Results
Conclusion

## ■ Calculate the outlying degree

$$OD(G_q) = \sum_1^n EDM(h_{q_s}, h_{k_s})$$

- ◆  $n \Leftrightarrow$  the number of contrast groups.
- ◆  $h_{k_s} \Leftrightarrow$  the histogram representation of  $G_k$  in the subspace  $s$ .

# Step Three - Outlying Aspects Identification

- [Problem Definition](#)
- [Related Work and Challenges](#)
- [GOAM Algorithm](#)
- [Step One - Group Feature Extraction](#)
- [Step Two - Outlying Degree Scoring](#)
- [Step Three - Outlying Aspects Identification](#)
- [Evaluation Results](#)
- [Conclusion](#)

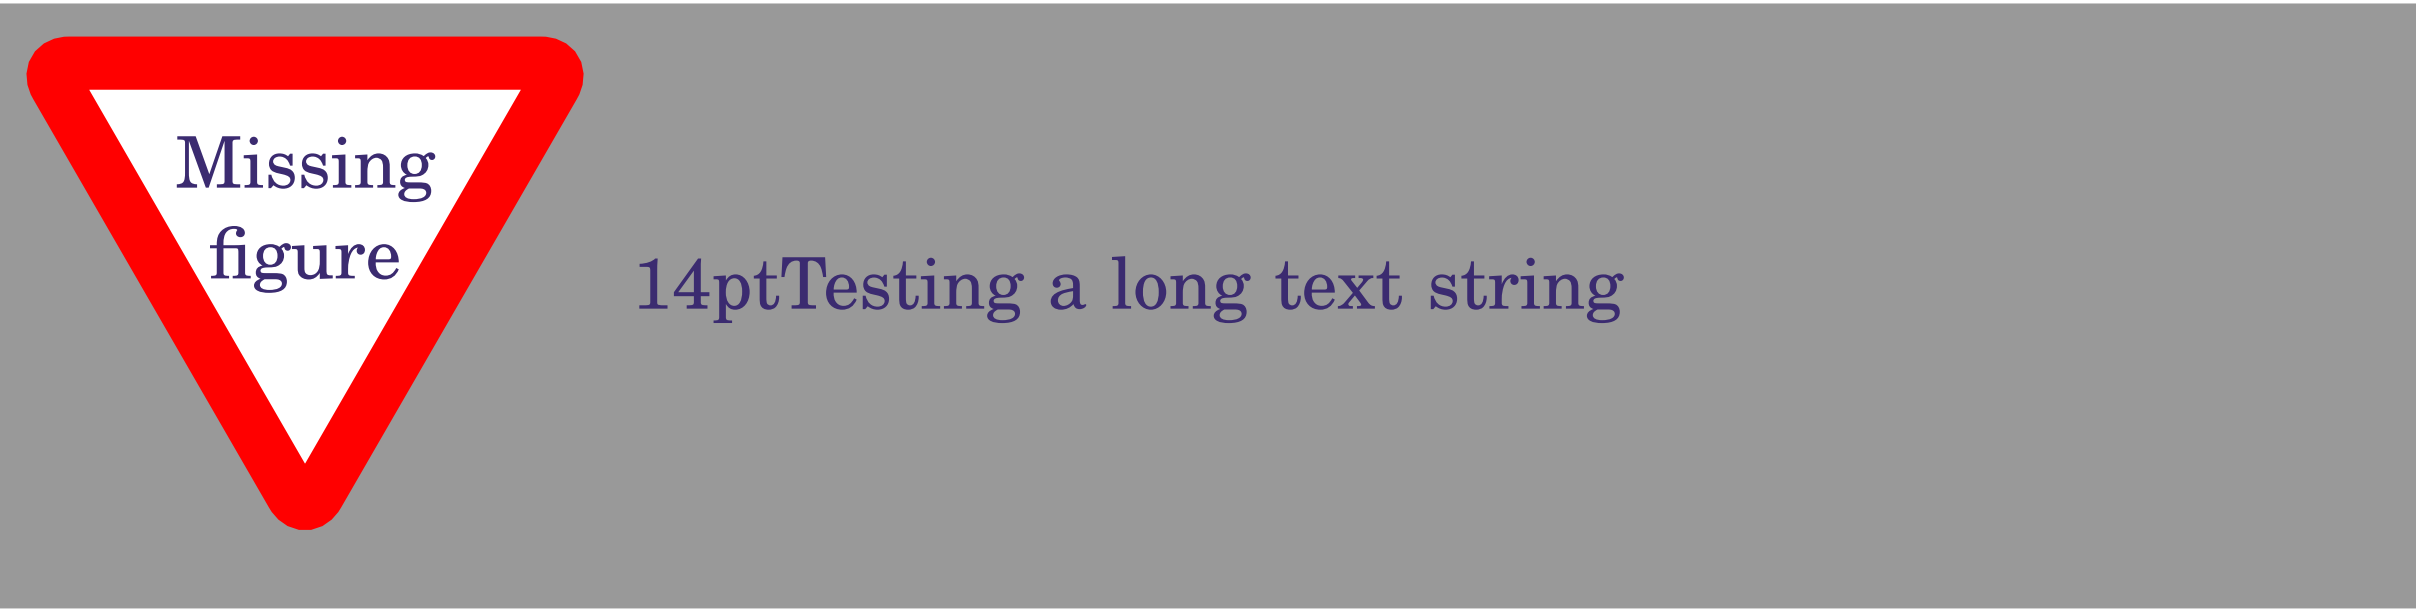

- Identify group outlying aspects mining based on the value of outlying degree.
- The greater the outlying degree is, the more likely it is group outlying aspect.
