Defn

Outlying Aspects Mining aims to identify the outstanding features of the query object.

- A teacher may be interested in the **characteristics** that make **one student distinctive** from others.
- NBA coaches would prefer to find out the strengths and weaknesses of the player (a query object).

| Player | 3PT% | FTA | FT% | To |
|--------|------|-----|-----|-----|
| P_1 | 65 | 4 | 33 | 8 |
| P_2 | 78 | 1 | 65 | 5 |
| P_3 | 58 | 6 | 46 | 3 |
| P_4 | 68 | 1.2 | 85 | 6.2 |
| P_5 | 58 | 6.2 | 36 | 3.4 |

Outlying Aspects Mining vs Outlier Detection

- Problem Definition
- Outlying Aspects Mining
- Group Outlying Aspects Mining

- GOAM Algorithm
- Evaluation Results
- Conclusion

| Player | 3PT% | FTA | FT% | To |
|--------|------|-----|-----|-----|
| P_1 | 65 | 4 | 33 | 8 |
| P_2 | 78 | 1 | 65 | 5 |
| P_3 | 58 | 6 | 46 | 3 |
| P_4 | 68 | 1.2 | 85 | 6.2 |
| P_5 | 58 | 6.2 | 36 | 3.4 |

Outlying Aspects Mining

- Explain the distinctive **aspects** of the query object.
- The query object may (or may not) be an outlier.

Outlier Detection

- Find out **all** unusual **objects** in the whole dataset.
- **No** explanation on how they are different.

Group Outlying Aspects Mining

- Problem Definition
- Outlying Aspects Mining
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

Defn

Group outlying aspects mining aims to identify the outstanding features of the group of query object.

- Doctors desire to identify the merits & demerits between a group of cancer patients and normal people.
- NBA coaches are passionate about exploring the obvious advantages & disadvantages of the team.

|-------------------------------|
| Problem Definition |
| Outlying Aspects Mining |
| Group Outlying Aspects Mining |
| Related Work and Challenges |
| GOAM Algorithm |
| Evaluation Results |
| Conclusion |

Defn

Group outlying aspects mining aims to identify the top-k group outlying subspace $s \subseteq F$ in which the query group G_q is distinctive with other groups.

- $G = \{G_q, G_2, G_3, \dots, G_n\} \Leftrightarrow$ a set of groups.
- $G_q \Leftrightarrow$ the query group.
- Other groups \Leftrightarrow comparison groups.
- Each object in the group has d features $F = \{f_1, f_2, \dots, f_d\}$.

Term Definition

- Problem Definition
- Outlying Aspects Mining
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

■ Top-k group outlying subspaces

- ◆ $\rho_s(\cdot) \Rightarrow$ outlying scoring function.
- ◆ $\rho_s(\cdot)$ quantifies the outlying degree of the query group G_q in the subspace s .
- ◆ Order by DESC using scoring function $\rho(\cdot)$ to identify top K group outlying subspaces.

(a) Original Feature Spaces

(b) Group Outlying Spaces

(c) Another Subspaces

- Problem Definition
- Outlying Aspects Mining
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Trivial Outlying Features
 - ◆ One-dimension subspaces.
 - ◆ G_q 's outlying degree $\rho(\cdot) > \alpha$.

Table 1: $\alpha = 4$

| Feature | Outlying Degree |
|----------------|-----------------|
| $\{F_1\}$ | 4.351 |
| $\{F_3, F_4\}$ | 4.024 |
| $\{F_2, F_4\}$ | 2.318 |
| $\{F_2\}$ | 2.002 |
| $\{F_3\}$ | 1.028 |

- Problem Definition
- Outlying Aspects Mining
- Group Outlying Aspects Mining
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Non-Trivial Outlying Subspaces
 - ◆ Multi-dimension subspaces.
 - ◆ G_q 's outlying degree $\rho(\cdot) > \alpha$.

Table 2: $\alpha = 4$

| Feature | Outlying Degree |
|----------------|-----------------|
| $\{F_1\}$ | 4.351 |
| $\{F_3, F_4\}$ | 4.024 |
| $\{F_2, F_4\}$ | 2.318 |
| $\{F_2\}$ | 2.002 |
| $\{F_3\}$ | 1.028 |

[Related Work - Outlying Aspects Mining](#)

[Challenges \(1\)](#)

[GOAM Algorithm](#)

[Evaluation Results](#)

[Conclusion](#)

■ Existing Methods - Feature selection

- ◆ To distinguish two classes: the query point (positive) & rest of data (negative)

Disadvantages

- ◆ Positive and negative classes are **Not** balanced.
- ◆ **Not** quantify the outlying degree accurately.
- ◆ **Not** identify group outlying aspects.

Advantages

- ◆ Easy to operate.
- ◆ Resolve dimensionality bias.

[Related Work - Outlying Aspects Mining](#)

[Challenges \(1\)](#)

[GOAM Algorithm](#)

[Evaluation Results](#)

[Conclusion](#)

■ Existing Methods - **Score-and-search**

- ◆ Define an outlying score function.
- ◆ Search subspaces.

Disadvantages

- ◆ Dimensionality bias.
- ◆ Search efficiency is **Not** high (dataset is large).
- ◆ **Not** identify group outlying aspects.

Advantages

- ◆ Quantify the outlying degree correctly.
- ◆ High Comprehensibility.

Step Two - Outlying Degree Scoring

| |
|--|
| Problem Definition |
| Related Work and Challenges |
| GOAM Algorithm |
| Step One - Group Feature Extraction |
| Step Two - Outlying Degree Scoring |
| Step Three - Outlying Aspects Identification |
| Evaluation Results |
| Conclusion |

■ Calculate the outlying degree

$$OD(G_q) = \sum_1^n EDM(h_{q_s}, h_{k_s})$$

- ◆ $n \Leftrightarrow$ the number of contrast groups.
- ◆ $h_{k_s} \Leftrightarrow$ the histogram representation of G_k in the subspace s .

Step Three - Outlying Aspects Identification

- [Problem Definition](#)
- [Related Work and Challenges](#)
- [GOAM Algorithm](#)
- [Step One - Group Feature Extraction](#)
- [Step Two - Outlying Degree Scoring](#)
- [Step Three - Outlying Aspects Identification](#)
- [Evaluation Results](#)
- [Conclusion](#)

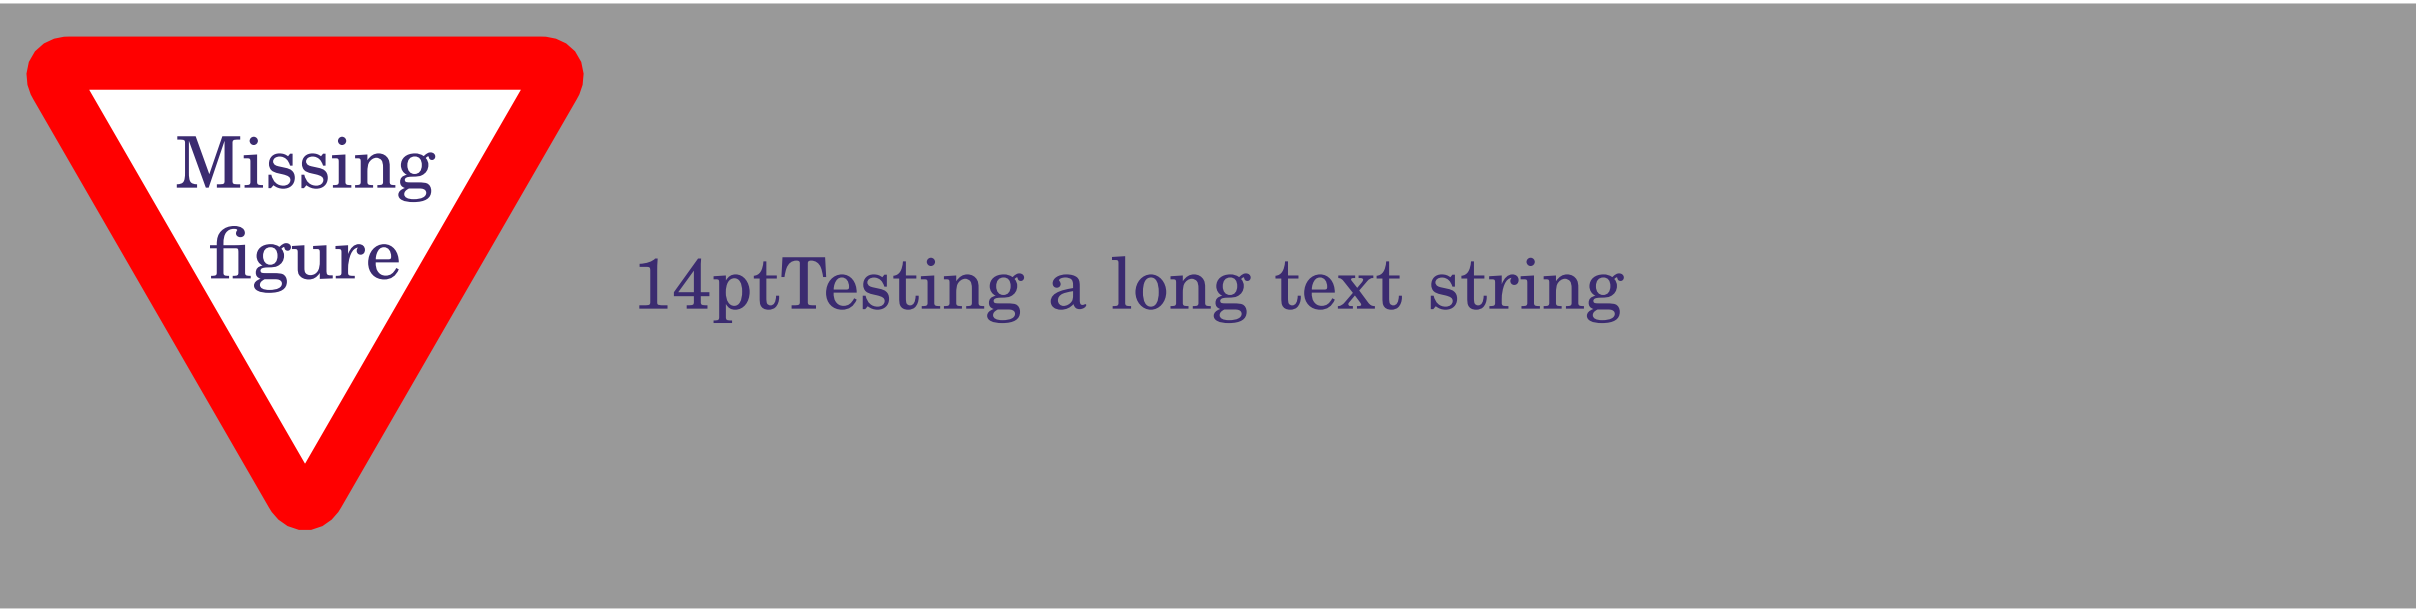

- Identify group outlying aspects mining based on the value of outlying degree.
- The greater the outlying degree is, the more likely it is group outlying aspect.
